Proposed QA Control Review / participation and decision rights

PEOPLE	RELATIONSHIPS	NEXT CONVERSATIONS
Who is affected?	Who contributes and decides?	What needs confirmation?

1. People and roles

QA and night-shift operators

According to W03-S01, the people affected in night operations would be Nia, as the night QA operator, and the chosen operator that would participate in checking the workflow. Nia will need original evidence preserved, and review sessions about shift duties. Nia can review the proposed workflow fits QA work schedule.

Engineering

In W03-S02 Elias states he can explain the command and scheduler records, check a technical interpretation, and advise on technical feasibility using read-only exports. Elias will be needing the help of the records technician to have short access to the records.

Operations

One of Mara's priorities is she needs a clear route in how the review will go and a summary of who will be involved, what their role is, and getting their contact information. Another priority is figuring out a meeting time in which the night shift and day shift are both represented in the decision making process. The analyst is needed to differentiate the people doing the work, the ones affected, the ones with specialty knowledge, and who is authorizing the ones with specialty for the work. From this, Mara can then confirm missing people and what decision are being made before getting all the requirements.

Sponsor and record custodian

In W03-S03, record custodian entry has no named contact that has taken on the role necessary that is need for the Engineering department. A route proposed by Operations in W03-S03 is giving sponsors

ability to approve work within organization's process.

2. Relationships and next steps

Competing needs and tradeoff

Possibile participation tension is Nia supervises night shift only, and the packet contains Nia's account only, according to W03-S01. This means she is crucial and also needs to be accounted for by the rest for the review although not everyone works at the same time. A proposed single meeting in the daytime by Mara with Nia requesting night shift participation in W03-S04 shows a needed agreement to be able to continue.
A solution could be a zoom meeting with an agreed time so everyone can input opinions or two separate meetings during daytime and nighttime so everyone can input without having to go out of their schedule.

Consultation plan

For operations this review will need consulting from Nia for night shift operations with shift scheduling and the the future chosen night shift operator for the review.
For the engineering department, they would need to consult the records technician for availability to confirm details and give Elias access to records.
Then Mara would need to confirm everyone's role and position with the agreed meeting because even though a person may have little formal authority, they are needed because of their expertise and the shift change impacts their ability to participate.

Missing voices and validation

Two unresolved participation are night shift operator and record technician. Elias should have the discussion with the records technician and confirm his participation. Nia and the team should choose the night shift operator available within the specific shift schedule.

Next step toward requirements

What must be confirmed is for Elias to be granted access to the records by the record technician. An available operator for the night shift operations also needs to be confirmed. Then the meeting time should be confirmed to include everyone to agree to the proposed terms if the project were to be authorized.

3. Book evidence connection

Book form connection

One way the questions helped improve my consultation plan is it helped me focus on what key factors are important to the plan and what isn't to avoid having to do an extra steps that aren't necessary.
