Validated Requirements Set

Alexandra Rodriguez · Revision 9908

R-01 · functional

Requirement: The system must distinguish held from ready by checking if it is being used by scheduling or intake. From this, it must check if it has confirmation to move on to the next step in the scheduling process in order to be ready.

Source: W04-S01 · Dana Ruiz

Rationale: This is important to make sure that the system accurately organizes information and has all the permissible functions they need to move on and verify the appointment,

Acceptance check: Someone can check the visitor's appointment in the system when looking at scheduling and seeing whether or not it is held or ready.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: The distinction between held and ready is the both intake and scheduling use it and have different meanings. For intake, held means a visitor hash arrived but cannot move forward, for scheduling it means the visitor needs to have final confirmation in order for it to be a ready process.

R-02 · user

Requirement: Staff must know which condition applies, who was the person who changed it and what is the next step.

Source: W04-S01 · Dana Ruiz

Rationale: This is important to make sure staff is constantly up to date on what the requirements are to have a smooth working environment and to be able to point out mistakes if any arise.

Acceptance check: Someone can check it checking the conditions of what cause the status exception, such as checking the scheduling logs.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: The distinction between held and ready is the both intake and scheduling use it and have different meanings. For intake, held means a visitor hash arrived but cannot move forward, for scheduling it means the visitor needs to have final confirmation in order for it to be a ready process.

R-03 · business

Requirement: A same day slot can be offered if a room and a qualified clinician are available.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Both need to be available and ready in order to not waste time and get the necessary information.

Acceptance check: Being able to make sure the conditions are met before a same-day slot would be on the staff to ensure a qualified technician and a room is available.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: The condition that must be true is a room and a clinician are available if they want a same-day slot.

R-04 · functional

Requirement: When readiness changes, the staff and visitor would need a updated version of the necessary info to move forward.

Source: W04-S02 · Dr. Lena Okafor

Rationale: This matters to make sure all aspects of the process are up to date to be able to accurately access what the future technical implementation will be.

Acceptance check: The readiness changes would be checked when the qualified technician is given the okay to check the readiness state and then it would be validated by Dr.Lena, the Clinical Operations Lead.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: The condition that must be true is a room and a clinician are available if they want a same-day slot.

R-05 · user

Requirement: Approved communication and support through confirmation, rescheduling, and check-in are necessary to avoid conflict and have both staff and visitor in agreement on what actions are taking place.

Source: W04-S03 · Priya Shah

Rationale: This matters to make the process more efficient and run smoothly without having to pause actions for reassurance between both parties or even worse conditions such as unnecessary tasks taking place that would hinder the project because of a miscommunication.

Acceptance check: Since Priya, Patient Access Coordinator, is in charge of validating access and communication needs, she would ensure that communication between visitor and staff is clear and concise.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Authorized staff know support is arranged by having a phone or staff-assisted route where access to the service isn't dependent on one digital channel.

R-06 · constraint

Requirement: Since Intake could not view visitor's communication preference, prohibiting understanding between staff and the visitor, an alternative would be to have access to the portal through another route. This would allow for it to be easier.

Source: W04-S03 · Priya Shah

Rationale: This matters so a situation like the visitor needing to explain their needs again to the staff can be avoided so there is no delay.

Acceptance check: Priya should be able to confirm a visitor has access and their communication needs are met and delivered to the rest of the staff to avoid conflict.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Authorized staff know support is arranged by having a phone or staff-assisted route where access to the service isn't dependent on one digital channel.

R-07 · nonfunctional

Requirement: The minimum information rule for shared displays is only the necessary, required information for the staff should be shared such as their role and their access.

Source: W04-S04 · Jordan Kim

Rationale: This matters so every staff member that is needed can easily identify their role and what is needed from them without having to be overloaded with information that isn't necessary to their job.

Acceptance check: Given that Jordan validates access, when there is a need to share displays with the staff, he can verify the info and the necessary access when the required staff needs it.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: The shared display privacy boundary is staff have access to minimal shared displays that only show the necessary information they need to be able to do their assigned tasks. The audit boundary is every change made must be logged, including what was changed, what it was previously, what is now in its place, and the time this action took place.

R-08 · functional

Requirement: The status-change history must take not of the change made, what was the info was previous to the change, what is not the new information and what time is was changed.

Source: W04-S04 · Jordan Kim

Rationale: This is important because it keeps a log of all the actions taken place that can be referred to later to confirm certain steps were taken place correctly or if there was a mistake, so they could then pinpoint exactly when and where it happened.

Acceptance check: Since Jordan is the Health IT and Privacy Analyst, and can validate audits, he can confirm the records of the actions taken place when a review of the logs is necessary.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: The shared display privacy boundary is staff have access to minimal shared displays that only show the necessary information they need to be able to do their assigned tasks. The audit boundary is every change made must be logged, including what was changed, what it was previously, what is now in its place, and the time this action took place.
